**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of Figure 4 in the reply filed on 3/2/07 is acknowledged.
2. Claims 6-10 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected embodiment, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 3/2/07.
3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

***Priority***

4. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Drawings***

5. Figures 2A and 2B should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the

applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

6. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

7. The abstract of the disclosure is objected to because of inclusion of legal phraseology such as "comprises" in line 1. Correction is required. See MPEP § 608.01(b).

8. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: "Data Encoding/Decoding Apparatus Without Phase Adjustment".

### ***Claim Rejections - 35 USC § 102***

9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2621

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

10. Claims 1-5 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by Applicant's admitted prior art (AAPA).

AAPA, in Figures 1 and 2, discloses the same data encoding/decoding apparatus as specified in claims 1-5 of the present invention, comprising a decoder 16 decoding a coded stream, which is formed in a first format and inputted on real time, to generate video data and audio data; a video output memory 13 storing the video data from the decoder; an audio output memory 15 storing the audio data from the decoder; a video input memory 3 provided to be connected to the decoder through a first data path when the coded stream of the first format is transcoded to generate a second stream formed in a second format; an audio input memory 5 provided to be connected to the decoder through a second data path when the transcoding is performed; and an encoder 6 encoding the video data from the video input memory and the audio data from the audio input memory to generate the second stream of the second format.

With respect to claims 2-5, when the transcoding is performed, the first data path and the second data path are set from OFF state to ON state, so that the video data output from the decoder is stored in the video input memory 3 through the first data path and the audio data output from the decoder is stored in the audio input memory 5 through the second data path; a video output interface 12 outputting the video data stored in the video output memory to an external device in a predetermined format at predetermined times; and an audio output interface 14 outputting the audio data stored in the audio output memory to an exterior device in a predetermined format at

predetermined times; a video input interface 2 storing in the video input memory video data which is inputted from an external device at predetermined times; and an audio input interface 4 storing in the audio input memory audio data which is inputted from an external device at predetermined times; a clock generating unit 8 generating a clock signal for circuit components of the data encoding/decoding apparatus wherein the clock signal from the clock generating unit is supplies to each circuit component without adjusting a phase of the clock signal based on clock reference information of the coded stream inputted on real time (Fig. 2).
